

Metrixcloud

Digital solutions

for robust sustainability
management processes

Sustainability first.

Community conscious.

Proactive sustainability management is good for business, your stakeholders, and society as a whole.

MetrixCloud is a sustainability management leader that provides software and services that help our clients advance their sustainability strategies, improve operational transparency and accountability, and enhance their business resilience.

Our intuitive and secure software solutions digitise your sustainability and risk management processes and enable you to shift your focus away from data gathering and consolidation to in-depth analysis and data-driven decision-making. These solutions are supported by a network of subject matter experts, with many years of experience.

About MetrixCloud

With over 50 years of industry experience, MetrixCloud has established itself as a trusted solutions provider that helps to reduce the time, resources, and frustration associated with managing sustainability and risk management obligations.

Our goal is to enable any business to achieve robust sustainability management, no matter its size or complexity.

Our easy-to-use, scalable, and affordable software solutions are delivered as a service and offer value out of the box, including seamless deployment and real-time analytics for consistent and reliable reporting and an enhanced brand reputation.

MetrixCloud is a division of **Safety SA**, South Africa's leading provider of health and safety training, solutions, and testing services.

Our Software

Delivered as a service, our flagship software solutions include:

Supports day-to-day Environment, Health and Safety (EHS) management and reporting

Enables the collection, management and reporting of Environmental, Social and Governance (ESG) data

Simplify EHS management, reduce risk, and promote compliance in real-time

EHSCloud is a scalable software-as-a-service solution that helps businesses digitise and manage their day-to-day EHS processes and reporting obligations. It offers an integrated view of a business’s risk profile at all levels.

What’s more, intuitive, easy-to-use mobile and web interfaces drive user adoption and enhance safety performance without the need for costly, customised software and implementation.

With real-time oversight, monitoring, and management capabilities, EHSCloud transforms the way you manage EHS risk and compliance. It connects stakeholders across your risk value chain, facilitating cross-company transparency and improving EHS engagement levels.

EHSCloud moves data collection from distributed spreadsheets to a consolidated, cloud-based platform that enables real-time EHS data analysis, decision-making, collaboration, and risk management.

Out-of-the-box best practice functionality

REDUCE THE RISK OF DOWNTIME AND LITIGATION

Digitised and automated EHS processes cut down the time, paperwork, and resources needed to achieve real-time compliance with ISO 45001 and ISO 14001 best practices.

IMPROVE DECISION-MAKING

With valuable insights across the entire organisation, EHSCloud supports data driven decision-making, helping you avoid potential risks.

ADVANCED MANAGEMENT INSIGHTS

View crucial insights related to:

> Incident management

From identification, investigation, and analysis to corrective action.

> Risk management

Track, analyse, and predict trends; review risk assessment findings and manage risk to prevent potential incidents.

> Audits and inspections

Compile reports within the application, including scheduling, execution, findings management, and corrective actions.

> COVID-19 management

EHSCloud ensures compliance with new health and safety requirements for staff screening and training, incident management, and PPE tracking.

Incorporate high quality ESG data in your decision making

ESGCloud is a software-as-a-service solution designed to help businesses optimise their non-financial reporting obligations. The solution enables the collection, management, and reporting of data from multiple operations, providing a single source of ESG truth from which disclosures against global frameworks can be made.

ESGCloud ensures that companies report on the most material topics to set benchmarks based on accurate data points, providing a reference point for transparency.

By connecting your ESG efforts to your competitive strategy, more opportunities emerge to drive profitability and stakeholder value creation. With ESGCloud, you can unlock accurate, real-time insights into your exposures and use this information to enhance accountability and inform strategic thinking.

ESGCloud is standard-agnostic software that lets you align with any number of standards, frameworks, or regulations, removing the mystery behind ESG reporting.

With ESGCloud, you can:

- Collect, manage, and analyse high-quality data from fragmented locations to create a centralised ESG database
- Make disclosures against any global sustainability framework
- Promote your ESG agenda by managing your ESG action plans across multiple operations
- Track risks and opportunities throughout the lifecycle of an investment
- Access an ESG content library of default standards, indicators, prebuilt workflows, and questions to guide you through configuration and the collection of valuable data
- Track events such as incidents, grievances, and stakeholder engagements

Our Services

At MetrixCloud, we understand that, sometimes, software alone isn't enough.

That's why we use an integrated approach spanning business support and advisory services through reporting and technology enablement to embed sustainability into your business processes and enhance long-term resilience and value creation.

Our network of experienced subject matter experts provide a range of strategic advisory and support services to help you get the most out of our software and amplify your sustainability impact for your business and its stakeholders.

Whether you have been managing and reporting on your sustainability obligations for years, or are just starting out, we are ready to advise and guide you at every step of your journey.

At MetrixCloud, we believe that the digitisation of sustainability management increases transparency, which leads to more informed strategy and better decision-making. In addition, we aim to reduce the effort and cost required to achieve these goals, which is why our solutions are:

Available through monthly, scalable subscription options

- Intuitive and easy-to-use
- Easily deployed and integrated across your business
- Delivered via the cloud, which reduces implementation and maintenance costs

Contact MetrixCloud to get your distributed workforce aligned with your sustainability goals in just a few days.
